Papua New Guinea Customs Service

How to change my AW User Profile

The following 'Functional Note' provides registered users of the ASYCUDA World (AW) system with the information necessary to enable them to change their AW User profile.

Each user can customise some of client features to suit their preferred user profile.

Features that can be customized are:

- o Password
- o Language
- o Appearance
- o Creation of Shortcuts

Any changes made will take effect immediately. There is no need to log off and login again.

This is done as follows:

1. Once logged-into the system, go to ASYCUDA ➜ **My Profile**

2. Right click and choose **Update**

3. The **My Profile – Update** screen is displayed with four TABs at the bottom

How to Change my Password

It is highly recommended to regularly change your own password.

This is done as follows:

1. Once **My Profile – Update** screen is displayed, go to the **Authentication** Tab

2. Enter your new password

3. Repeat your new password

4. Once completed, click on the **Verify the document** icon

5. Click on the **Message** window

6. Click on the **Validate** icon

7. The system will ask you to enter your old password

8. Once completed, click

9. If all is in order, the system will display the following **Information** window

10. Click on the **Information** window

ASYCUDA

How to Change the Language & Appearance

This is done as follows:

1. Once **My Profile – Update** screen is displayed, go to the **Preference** Tab

2. Stay on the Tab **1 - User interface** (from the left part of the screen)

3. Under the box **Look & feel theme,** choose from the drop down menu your favorite color

4. Under the box **Language,** choose from the drop down menu "**English | Australia**"

   Changing the default language to "**English | Australia**" will allow you to have displayed the manifest and SAD labels which are used in the Solomon Islands (for example, the SAD label for Box 3 indicates "Forms" in the default language while in the Solomon Islands language it is "Pages").

5. Once completed, click on the **Verify the document** icon
6. Click on the **Message** window

7. Click on the **Validate** icon

8. Click on the **Information** window

As an example

Original Color and SAD labels

After changing the **Look & feel theme** and **Language** the screen will appear as follows

How to Create Shortcuts

When a user is regularly performing the same series of actions, it is practical for him/her to have a shortcut to do in one single click the same series of actions.
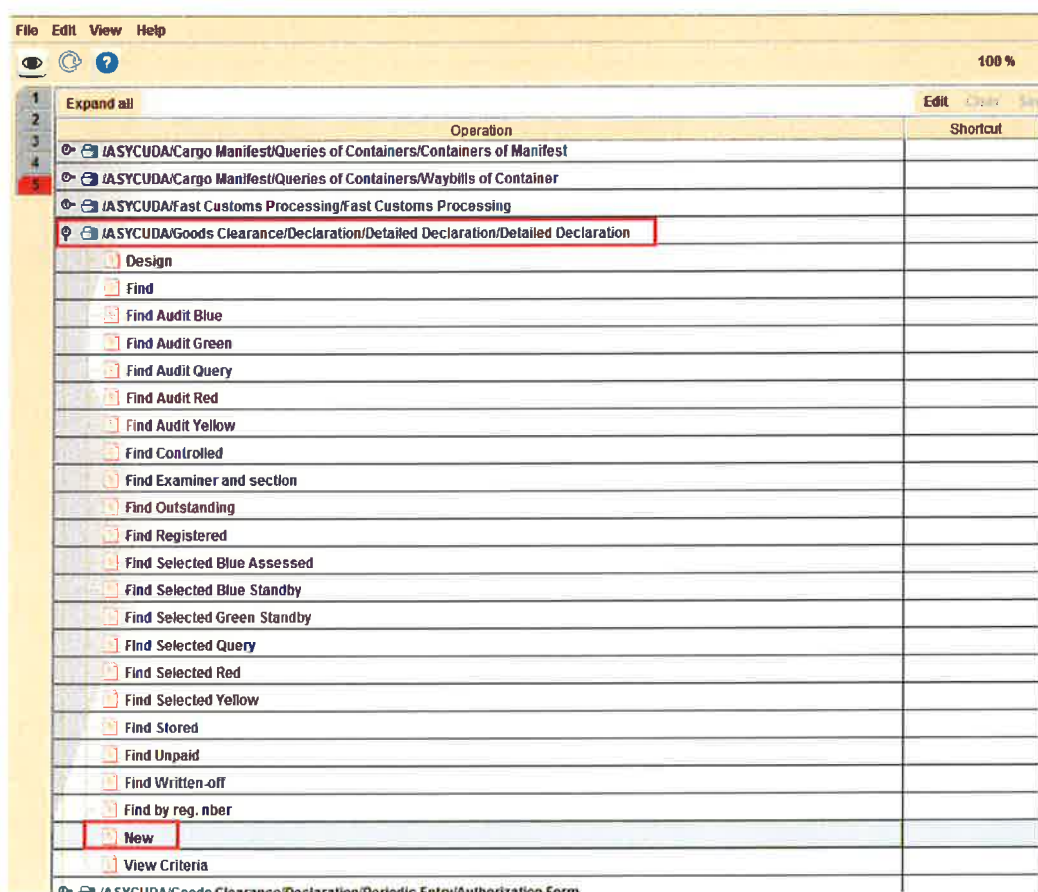

While most actions may be mouse or track pad-driven, ASYCUDA users may also individually define keyboard short-cuts to their most commonly used functions

As an example, in order to create a SAD, the declarant will also have to do the same action **Go to ASYCUDA – Declaration – Detailed Declaration – right click and choose New**.

To be more practical, the declarant can define a shortcut, for example CTRL-N that will do exactly the same.

This is done as follows:

1. Once **My Profile – Update** screen is displayed, go to the **Preference** Tab

2. Go to Tab **5** (from the left part of the screen)
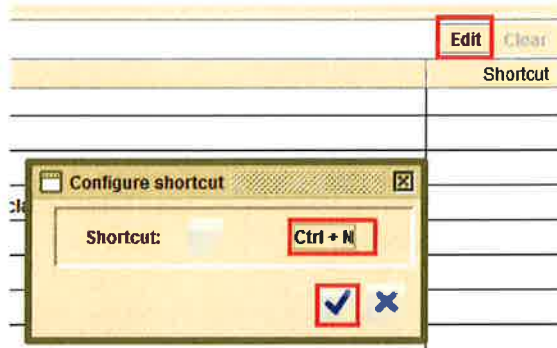

3. Scroll down until you find the proper action

4. Click on **Edit** and enter the sequence of keys that will be used as the shortcut (Ctrl N)
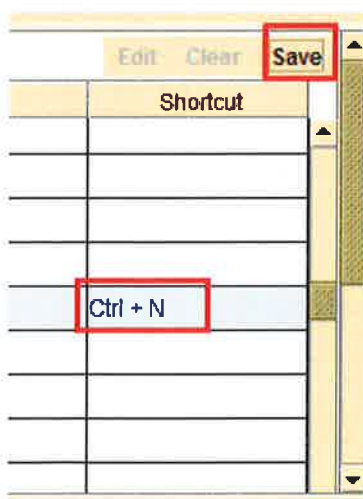

5.   Click on **Edit** and enter the sequence of keys that will be used as shortcut (Ctrl N)

6.   Click on the **Configure shortcut** screen to confirm the sequence of the keys for the shortcut.

     Conversely, click on the **Configure shortcut** screen if you don't want to confirm the sequence of the keys.

     Once confirmed, the sequence of keys will be automatically displayed in the column **Shortcut**.
7.   Click on **Save**

8.   Go to the Tab **3** (from the left part of the screen) **Notary service security**

     Tick **Remember keystore folder** under the **Workstation settings** part.
9. Click on the **Message** window

10. Click on the **Validate** icon

11. Click on the **Information** window

12. Test the shortcut by pressing the keys CTL and N at the same time; a new SAD screen should be opened.
